

SOLANA TOKEN CREATOR

Earn Passive Income with Solana Token Creator

Complete Beginner's Guide — Crypto • Solana • Marketing • Partnership

This book is designed for absolute beginners. You don't need to know anything about crypto or marketing. We'll start from money and blockchain basics, introduce Solana and Phantom wallet, explain our project (Solana Token Creator), and then show you exactly how to earn SOL with our Partnership Program.

[!\[\]\(d66ff64371a51729ac8c1cdaa685ba6f_img.jpg\) **Disclaimer:**](#) This document is educational and not financial advice. Cryptocurrency prices are volatile. Examples in USD are approximations and may change as SOL price changes. Payouts are always in SOL.

Table of Contents

- Chapter 1 – Introduction: Why This Guide?
- Chapter 2 – What is Money, What is Crypto?
- Chapter 3 – How Blockchain Works (Simple)
- Chapter 4 – Welcome to Solana (+ Phantom Wallet Setup)
- Chapter 5 – About Solana Token Creator (Project Overview)
- Chapter 6 – Using Solana Token Creator (The Product)
- Chapter 7 – Digital Marketing Basics (Twitter, Telegram, Discord...)
- Chapter 8 – The Partnership Program (Business Model)
- Chapter 9 – Step-by-Step Guide (Your First Week)
- Chapter 10 – Scaling Up (From Side Income to Community)
- Chapter 11 – FAQs (Troubleshooting)

Chapter 1 – Introduction: Why This Guide?

Who this is for: students, stay-at-home individuals, people with free time who want to earn online, and anyone curious about crypto but afraid it's too technical.

What you will learn:

- Money → Crypto basics, in plain language
- Blockchain explained with simple analogies
- Solana and Phantom wallet setup
- What Solana Token Creator is and why people buy credits
- How the Partnership Program pays you instantly in SOL
- Ready-to-use outreach and post templates

How to use this guide: read Chapters 1–6 today, then Chapters 7–11 as you start earning.

Timeline to success:

- First hour: install Phantom, send us your wallet, get your partner link
- First day: share 3–5 posts and 3 DMs (personalized)
- First week: repeat daily, collect your first payouts in SOL

Chapter 2 – What is Money, What is Crypto?

Money's journey: barter → coins → paper → bank accounts → digital payments → cryptocurrency. Crypto is digital money that you own directly, without banks.

Why crypto matters:

- Ownership: you hold the keys (not a bank)
- 24/7 and borderless: send value globally in seconds
- Low fees: often less than a cent on Solana
- Transparent: transactions are recorded publicly on blockchain

Everyday example: Sending \$100 internationally by bank can take days and cost \$20; on Solana it can take seconds and cost about \$0.001.

Banks vs Crypto (quick comparison):

Chapter 3 – How Blockchain Works (Simple)

Analogy: Blockchain is a public notebook. Every new page is a 'block' of transactions. Once written, pages cannot be erased. Pages are linked in order: this is the 'chain'.

Key concepts:

- Block: a batch of transactions
- Chain: blocks linked in time order
- Validator: a computer that checks transactions are valid
- Wallet: your account to hold and send crypto

Myths vs Facts:

- Myth: "Crypto is anonymous." → Fact: it's pseudonymous; addresses are public.
- Myth: "If I lose my seed phrase, support can recover it." → Fact: No. Keep backups safely.
- Myth: "Transactions can be reversed." → Fact: On-chain transactions are final.

Chapter 4 – Welcome to Solana (+ Phantom Wallet Setup)

Solana highlights: fast, low-cost, and scalable. Typical fees can be ~ \$0.001; the network supports very high throughput compared to many blockchains.

Why Solana for this program:

- Low fees keep experimentation affordable for newcomers
- High speed → great user experience when creating tokens
- Strong ecosystem of wallets and tools (e.g., Phantom)

Phantom Wallet Setup (Desktop):

- 1) Install Phantom Chrome extension from the official store
- 2) Create a new wallet and set a strong password
- 3) Write down the seed phrase on paper (never share, never screenshot)
- 4) Pin Phantom for easy access and copy your wallet address

Phantom Wallet Setup (Mobile):

- 1) Install Phantom app from App Store / Google Play
- 2) Create/Import wallet → keep seed phrase safe

3) Enable biometric lock for convenience

First SOL: buy on a reputable exchange or receive from a friend to test a small transfer.

Note on Growth Potential:

Beyond Solana's advantages of low fees and speed, it is also an asset with strong long-term growth potential. For example, over the past year the price of SOL has increased by more than 300%. This means that partners are not only earning passive income in SOL, but also accumulating an asset that may appreciate against the U.S. dollar. In other words, you are building 'passive income on top of passive income.'

Chapter 5 – About Solana Token Creator (Project Overview)

Who We Are: We exist to make blockchain fair and accessible. We believe many people are priced out or intimidated by technical barriers.

Why We're Here: Traditional token launches need developers and complex steps. We remove those barriers so anyone can launch safely and cheaply.

What We Offer:

- No-Code creation — never write code
- Affordable pricing — 1 credit = 0.1 SOL
- Safety-first — tokens minted to the user's wallet; mint & freeze revoked
- Privacy — we only need your wallet address to pay commission
- Transparency — metadata to IPFS; payouts on-chain

Who We Serve: newcomers, meme coin creators, influencers, small brands, curious traders.

Vision: Evolve from token creation to a full platform for token management and growth.

Chapter 6 – Using Solana Token Creator (The Product)

What customers do:

- Buy credits (1 credit = 0.1 SOL)
- Fill token details: name, symbol, supply, decimals
- Upload logo and description to IPFS
- Confirm and mint → token delivered to their wallet

Best practices:

- Choose clear token names and symbols
- Start with a reasonable supply (too big can confuse newcomers)
- Publish a simple tweet/thread explaining the token's purpose

Security tips: never share seed phrase; triple-check recipient addresses.

💰 Example: Income Potential for Partners (SOL \approx \$200 TODAY — price changes!)

- 1 credit = 0.1 SOL \approx \$20
- 10 credits = 1 SOL \approx \$200 \rightarrow partner earns \$40–\$70
- 50 credits = 5 SOL \approx \$1,000 \rightarrow partner earns \$200–\$350
- 100 credits = 10 SOL \approx \$2,000 \rightarrow partner earns \$400–\$700

⚠️ SOL price is volatile; these are examples. Payouts are always made in SOL.

Chapter 7 – Digital Marketing Basics (Twitter, Telegram, Discord...)

Core idea: don't spam; deliver value and context. Speak like a helpful friend, not a salesperson.

Personas you can target: meme coin creators, influencers, small brands, crypto-curious students.

Twitter (X) Tactics:

- Tweet short value statements with visuals; use #Solana #Web3 #Crypto
- Reply under relevant threads (be helpful, not pushy)
- DM outreach: personalize with the person's name or recent tweet

Telegram/Discord Tactics:

- Ask admins for permission to share; offer value (how-to guide, tips)
- Create a tiny "how to launch a token in 60s" post with your link

WhatsApp/Facebook:

- Share a simple message to friends/classmates; avoid over-posting

Copy-Paste Tweet Templates:

1) "Launch a Solana token in minutes — no code. 1 credit = 0.1 SOL. I'm partnering with @SolanaPub. Try it: [your link] #Solana #Web3 #Crypto"

2) “No dev, no stress. Create your SPL token fast and cheap. Earn SOL from your community token. Start here: [your link] 🚀”

DM Outreach Templates:

A) “Hey [name], saw your community on X 👁️ I’m partnering with Solana Token Creator (no-code token launch). We offer 20–35% instant SOL rev share. Want details?”

B) “Thanks for the reply 🙌 You get a unique link. Each credit is 0.1 SOL; you earn 20–35% instantly in SOL. No dashboard, on-chain payouts.”

Do’s & Don’ts:

- Do: personalize, be polite, share examples, use visuals
- Don’t: mass-DM, overuse links, make unrealistic promises

Chapter 8 – The Partnership Program (Business Model)

How it works:

- You get a unique partner link (attribution window: 30 days, last-click)
- You earn 20–35% for each confirmed credit purchase
- Payouts are instant in SOL from our admin wallet (public on-chain)

Rules: no self-referrals; fraud/spam voids rewards; terms may evolve for future transactions.

Chapter 9 – Step-by-Step Guide (Your First Week)

Day 0 (Setup): Install Phantom, send us your wallet, get your link.

Day 1: Post 3 tweets + send 3 DMs (personalized).

Day 2–3: Engage in 2 Telegram/Discord groups; share a short how-to message.

Day 4–5: Create a short thread (“How to launch a token in 60 seconds”).

Day 6–7: Review what worked. Keep the best message, repeat next week.

Tracking ideas (simple sheet): date, posts sent, DMs sent, clicks, credits sold, payout in SOL.

Chapter 10 – Scaling Up (From Side Income to Community)

Start small, then:

- Build your own Telegram/Discord; post tips and mini-guides weekly
- Collaborate with micro-influencers (rev-share, not upfront fees)
- Run small contests (“Win 1 credit” with your link pinned)
- Share Explorer screenshots of on-chain payouts (proof)

Chapter 11 – FAQs (Troubleshooting)

Q1) Do I need to invest money?

A: No. You only share links; no upfront cost.

Q2) Is it risky?

A: You’re not sending your money; payouts are on-chain, transparent.

Q3) I lost my seed phrase—can you recover it?

A: No. No one can. Always keep secure backups.

Q4) I didn’t receive a payout yet—what do I check?

A: Confirm the purchase was completed, verify on-chain, and ensure the sale was attributed to your link (last-click within 30 days).

Q5) Can I promote anywhere?

A: Avoid spam. Respect group rules. Focus on relevant communities.

Q6) How much can I earn?

A: Depends on your effort and audience size. See the SOL \$200 examples for estimates (prices change).

Q7) Do I pay taxes?

A: Depends on your local regulations. Please consult a professional.

Q8) What if someone asks for upfront payment for a tweet?

A: We don’t pay upfront; our model is rev-share with instant SOL payouts.
